A/Uniclease ABC chain A - Mycobacterium tuberculosis (strain H37RV)

N.Alternate names: uvrA protein
N.Conclass Mycobacterium tuberculosis
C;Date: 17-Jul-1998 #sequence_revision 17-Jul-1998 #text_change 02-Feb-2001
C;Accession: A70019

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Submitted to the EMBL Data Library, February 1997
A; Bogusz, D.
Submitted to the EMBL Data Library, February 1997
A; Boscription: CDNA sequence for an acyl carrier protein from actinorhizal nodules of CA
A; Reference number: 216750
A; Accession: T09583
A; Status: preliminary; translated from GB/EMBL/DDBJ
A; Molecule type: mRNA
A; Residues: 1-136 < BOGS>
A; Residues: 1-136 < BOGS>
A; Coss-references: EMBL: Y10994
C; Superfamily: acyl carrier protein; acyl carrier protein homology
C; Reywords: carrier protein; fatty acid biosynthesis; phosphopantetheine; phosphoprotein
F; 56-127/Domain: acyl carrier protein homology < ACP>
F; 51/Binding site: phosphopantetheine (Ser) (covalent) #status predicted

This SWISS-PROT entry is copyright. It is produced through a collaboration between the Swiss Institute of Bioinformatics and the EMBL outstation the European Bioinformatics Institute. There are no restrictions on its use by non-profit institutions as long as its content is in no way modified and this statement is not removed. Usage by and for commercial entities requires a license agreement (See http://www.isb-sib.ch/announce/or send an email to licenseéisb-sib.ch).
                                                                                 LEIC ACIGS RES. 24:4420-4449(1996).
FUNCTION: KNOWN TO BE REQUIRED FOR THE ASSEMBLY OF 30S PARTICLES AND MAY ALSO BE RESPONSIBLE FOR DETERMINING THE CONFORMATION OF THE 16S RRNA AT THE A SITE (BY SIMILARITY).
SIMILARITY: BELONGS TO THE S14P FAMILY OF RIBOSOMAL PROTEINS.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Ribosomal protein, Complete proteome.

"Molecular analysis of a cytoplasmic dynein light intermediate chain

reveals homology to a family of ATPases.",

J. Cell Sci. 108:17-24(1995).

I-FUNCTION: MAY PLAY A ROLE IN REGULATING INTERACTIONS BETWEEN

DYNEIN AND P150-GLUED, AND THE CELLULAR SUBSTRATES FOR DYNEIN-

MEDIATED MOTILITY (SUCH AS ORGANELLES).

I-SUBUNIT: CONSISTS OF AT LEAST 3 HEAVY CHAINS (ALPHA, BETA AND

GAMMA), 2 INTERMEDIATE CHAINS AND 8 LIGHT CHAINS.
                                                                                                                                                                                                                                                                                                                                                                                 Eukaryota; Merazoa; Chordata; Craniata; Vertebrata; Euteleostomi;

Submitted (OCT-1996) to the EMBL/GenBank/DDBJ databases.
-- FUNCTION: SEEMS TO SPECIFICALLY ACTIVATE OF PRO-GELATINASE A. MAY
THUS TRIGGER INVASION BY TUMOR CELLS BY ACTIVATING PRO-GELATINASE
A ON THE TUMOR CELL SURFACE (BY SIMILARITY).
-- COFACTOR: REQUIRES CALCIUM AND ZINC FOR ACTIVITY (BY SIMILARITY).
-- SUBCELLULAR LOCATION: TYPE I MEMBRANE PROTEIN (POTENTIAL).
-- SIMILARITY: COMTAINS I HEMOPEXIN-LIRE DOMAIN.
-- SIMILARITY: BELONGS TO PEPTIDASE FAMILY MIOA (ZINC
METALLOPROTEASE) ALSO KNOWN AS MATRIXIN SUBFAMILY.

-!- FUNCTION: INDUCES STROMAL CELLS TO PRODUCE PROINFLAMMATORY AND HEMATOPOLISTIC CYTOKINES (BY SIMILARITY).

-!- SUBGUILT: HOMODIMER (BY SIMILARITY).

-!- SUBCELLULAR LOCATION: SECRETED.

-!- STAILARITY: STROMS, TO OTHER MAMMALIAN INTERLEUKIN-17 AND TO HERPESVIRUS SAIMIRI IMMEDIATE EARLY GENE 13 PROTEIN.

-!- CAUTION: WAS ORIGINALLY (REF. 1) THOUGHT TO BE FROM MOUSE BUT, ON THE BASIS OF SUBSEQUENT WORK (REF. 2 AND REF. 3), HAS BEEN SHOWN TO
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Gaps

Nature 392.353-358(1998).

-I- FUNCTION: CATALYZES AN AMIDOTRANSFERASE REACTION THAT GENERATES IMIDAZIOL-4-CARBOXAMIDE MIDIAZOL-4-CARBOXAMIDE RIBONICLEGYIDE, WHICH IS USED FOR PURINE SYNTHESTS.

-I- PATHWAY: FIFTH STEP IN HISTIDINE BIOSYNTHETIC PATHWAY.

-I- SUBCELLICHAR LOCATION: CYTOPLASMIC (PROBABLE).

-I- SIMILARITY: BELONGS TO THE HISH FAMILY.

-I- SIMILARITY: CONTAINS 1 TYPE-1 GLUTAMINE AMIDOTRANSFERASE DOMAIN.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          MEDLINE-98196666; PubMed-9537320;

UBIQUINOL-CYTOCHROME C REDUCTASE IRON-SULFUR SUBUNIT (EC 1.10.2.2)
(RIESKE IRON-SULFUR PROTEIN) (RISP)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                STRAIN-D / ATCC 17899 / DSM 180;
Chen Y.L., Dincturk H.B., Qin H., Knaff D.B.;
Submitted (NOV-1997) to the EMBL/GenBank/DDBJ databases.
-!- FUNCTION: COMPONENT OF THE UBIQUINOL-CYTOCHROME C REDUCTASE COMPLEX (COMPLEX III OR CYTOCHROME B-C1 COMPLEX), WHICH IS A RESPIRATORY CHAIN THAT GENERATES AN ELECTROCHEMICAL POTENTIAL
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            2 FERROCYTOCHROME C. SUBJUILTS B-C1 ARE: CYTOCHROME B, SUBUNIT: THE MAIN SUBUNITS OF COMPLEX B-C1 ARE: CYTOCHROME B, CYTOCHROME C1 AND THE RIESKE PROTEIN.
SUBCELLULAR LOCATION: MEMBRANE-BOUND (POTENTIAL).
MISCELLANEOUS: THE RIESKE PROTEIN IS A HIGH POTENTIAL 2FE-2S
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     PS00199; RIESKE_1; 1.
